## **VIXXI Offers Solution to Bridge Technology Gaps for Rural America**

Emergency Services Response Alternative Thrusts Rural VoIP Customers towards FCC Compliance

IRVING, Texas. – February 14, 2006. VIXXI Solutions, majority owned by Spatial Data Inc., today announced the roll-out of its newest VoIP 911 service, Vixxi R-Link. As a result of this development, Public Safety Answering Points (PSAPs) that are not connected to ILEC Selective Routers are granted immediate access to nearly all technological enhancements offered by VIXXI. Additionally, rural PSAPs that are unable to provide rural addressing compliant with E911 standards can now permit their VoIP customers to transmit Automatic Location Information (ALI), and if desired, even maps, or written directions, to the rural emergency location.

“We are thrilled with our test results”, said Richard A. Peters, President of VIXXI Solutions. “Basically, for less than the cost of two PCs, a rural PSAP can provide every function that larger agencies enjoy when routing emergency calls for residents”, Peters continued.

“Since 40% of the United States does not have Selective Router access, this development gives the VoIP users in those areas a much more robust offering for 911 than even the landline customers in the same footprint! Rural PSAPs are suddenly launched out of the emergency services stone age, and firmly placed in 2006!”, Peters emphasized.

VIXXI’s thorough understanding of the crucial nature of geospatial information, coupled with its build-out of multiple VoIP Positioning Centers designed to field and route IP 911 calls, has facilitated this enormous step forward. Independent of Selective Router access, VoIP 911 calls placed anywhere in the United States can now receive true Emergency 911 call handling by implementing the VIXXI Solution.

Since inception in late 2005, VIXXI Solutions has launched service agreements with all of the local exchange companies in the U.S., and is now prepared to offer services nationwide ensuring FCC compliance for providers large and small.
