VIXXI / SolaCom Partner on Revolutionary E911 Solution

Complies with the FCC's Emerging i3 Specifications

IRVING, Texas. – May 7, 2007. VIXXI Solutions, Inc. and SolaCom Technologies have teamed to provide a complete solution for conventional and VoIP call handling.

The Vixxi/SolaCom E911 Emergency Network combines the VIXXI Call Management and VoIP Positioning Center (VPC) with SolaCom's Selective Router to reduce the costs of terminating/accepting E911 calls at smaller Public Safety Answering Point (PSAP) locations. "This solution will provide the ability to be compliant with emerging FCC i3 specifications for E911 VoIP calls, with no capital expenditures", emphasized Richard A. Peters, President and CEO of Vixxi Solutions and Spatial Data.

"This solution gives the PSAP the ability to handle VoIP without a forklift upgrade to the PSAP," Peters continued. "The PSAP will not incur any additional telephone company charges or additional training for calltakers."

As a long-term innovator in the public safety industry, Peters stated, "We are thrilled with the on-going improvement in emergency response thanks to our partnership with SolaCom. In essence, this levels the playing field to ensure that every 911 operator in America is given the tools to successfully respond to emergency events."

"The modernization of E911 to correctly handle VoIP/VoIM calls in a cost-effective manner requires significant innovation, but must be addressed in order to help 911 responders respond effectively to all emergency calls," notes Ray Vilis, VP iTel Division, SolaCom Technologies. "SolaCom's expertise in communications technology combined with VIXXI's expertise with geospatial information enables PSAPs to deploy an E911 solution for VoIP/VoIM that is seamless, extremely cost effective, and most importantly easily implemented."

VIXXI thoroughly understands the crucial nature of geospatial information, and is moving forward with build-out of multiple VoIP Positioning Centers designed to field and route IP 911 calls. As a result, VIXXI's product footprint can easily expand to other non-IP based solutions for public safety. Independent of access method, 911 calls placed anywhere in the United States can now receive true Emergency 911 call handling by implementing various components of the VIXXI Solution. Since its inception in late 2005, VIXXI has launched services in nine states, and is now prepared to offer services nationwide ensuring FCC compliance for VoIP providers and public safety agencies, both large and small.

About VIXXI Solutions, Inc./Spatial Data, Inc.

Spatial Data, majority owner of VIXXI Solutions, has been providing revenue-enhancing spatial applications to industry-leading companies including Fortune 500 clients since 1988. Headquartered in Irving, Texas, you can find them on the web at <http://www.vixxisolutions.com> and <http://www.spatial-data.com>.

About SolaCom Technologies

A privately held corporation headquartered in Canada's national capital region, SolaCom has acquired more than 25 years of knowledge and experience engineering some of the world's most advanced and reliable communication systems. Incorporated in 1998 as a separate operating company following a spin-off from CML Technologies, SolaCom pioneered many of the ideas used in today's digital voice switch. Most recently SolaCom acquired VoIP and media manipulation technology to enhance its ATC and C4I offerings, and to expand its offerings for selected service provider markets.
